

from cloth, and stitched to the front of the invention.

The invention has been described with reference to preferred embodiments thereof, which are intended to be illustrative, not limiting. Various modifications will be apparent to those of ordinary skill in the art without departing from the spirit and scope of the invention, as defined in the appended claims.

CLAIMS

What is claimed is:

1. A washable and reusable sanitary cover that removably engages to the upper frame rail of the foldable child seat found in the common shopping cart having a top portion attaching to the upper frame rail and a bottom portion hanging downward therefrom, the cover comprising:

a rectangularly shaped cloth member having an inner surface and outer surface;

a first fastening strip of hook material attached to the top portion along the entire width of the inner surface;

a second fastening strip of loop material attached along the entire width of the inner surface, half way between the top portion and bottom portion of the rectangularly shaped cloth member;

wherein the top portion is constructed and arranged to radially wrap around the upper frame rail of the fold out child seat, removably engaging the first fastening strip with the second fastening strip on the inner surface, interlocking the hook and loop surfaces.

2. The sanitary cover according to claim 1, wherein the rectangularly shaped cloth member comprises:

a machine washable cloth external layer;

a machine washable cloth internal layer;

a medial layer of machine washable cloth padding between the external and internal layers;

wherein the external layer, interior layer, and medial layer are stitched together interlocking all three layers into one contiguous portion.

3. The sanitary cover according to claim 1, wherein the bottom portion is constructed and arranged having three cloth pockets on the outer surface.

4. The sanitary cover according to claim 1, wherein the bottom portion is constructed and
